Bui Anh Tai

Senior Backend and Platform Engineer

Software Architecture · Enterprise Platforms · AI Systems

Ho Chi Minh City, Vietnam | LinkedIn | Engineering blog

Backend and platform engineer with 13+ years of experience designing, building, and modernizing enterprise systems. Combines architectural ownership with hands-on development across configurable PLM platforms, deployed AI agent capabilities, and insurance systems spanning multiple countries and cloud environments. Experienced in balancing business flexibility, performance, cost, and regulatory requirements.

PROFESSIONAL EXPERIENCE

Glide Systems Inc

Senior Engineer | May 2026 – Present

Product lifecycle management and AI agent platforms

- Built and evolved core services for a configurable, multi-tenant product lifecycle management platform, spanning dynamic data models, business rules, workflows, tracking, and reporting.
- **Built and deployed AgentOS**, a configurable AI agent platform supporting enterprise knowledge ingestion, retrieval, and agent execution.
- Implemented support for **multiple storage providers**, allowing storage selection through configuration.
- **Refactored and optimized** platform services and batch processing, addressing duplicate data, search inconsistencies, and complex permission behavior.

Java / Quarkus · Neo4j · Camunda

DiscoverMarket Vietnam

Lead Backend Engineer → Associate Technical Architect | December 2022 – April 2026

Embedded insurance across countries and cloud environments

- Architected and refactored an embedded insurance platform to support **multiple countries, cloud providers, and regions**, balancing deployment flexibility and cost with GDPR and country-specific insurance requirements.
- Took complex platform requirements from solution design through hands-on implementation, resolving difficult backend and integration problems.

EXPERIENCE CONTINUED

Global Fashion Group

Senior Software Engineer | August 2021 – October 2022

Services Team | Commerce platform modernization

- Contributed to the migration of a legacy monolithic commerce platform to microservices; designed database schemas and APIs for the new services.
- Implemented notification, consignment, file management, data resolution, settings, reporting, and promotion modules.
- Evaluated technologies, estimated implementation effort, reviewed code, and helped engineers resolve implementation challenges.

EARLIER CAREER

ZAMO LLC — Senior Software Engineer | May 2018 – August 2021

Built housing and healthcare services and enterprise document integrations with FileNet and PeopleSoft; migrated a .NET uploader to Java and trained engineers.

MoMo — Senior Software Engineer | April 2017 – April 2018

Implemented payment gateway APIs connecting partners, including Uber and banks, to the MoMo wallet.

CSC — Software Engineer | October 2015 – April 2017

Developed ServiceNow integrations, business rules, scripts, UI policies, and access controls.

GESO — Software Engineer | October 2012 – October 2015

Built distribution management software and ERP integrations with SAP, Epicor, FAST, and Effect; led implementation groups of three to five developers.

TECHNICAL EXPERTISE

Backend and architecture: Java 17/21, Quarkus, Spring Boot, WebFlux, microservices, multi-tenancy, configurable models

Data and workflows: Neo4j, PostgreSQL, Elasticsearch, MongoDB, Redis, Kafka, Camunda, business rules

Cloud and delivery: AWS Lambda, DMS, SQS, Google Cloud, Docker, Kubernetes, Terraform, JUnit, Testcontainers

Integration and AI: AgentOS, configurable agents, knowledge ingestion and retrieval, MCP, REST APIs, Keycloak

EDUCATION AND LANGUAGES

Ho Chi Minh City University of Education | Bachelor degree in Information Teaching

Vietnamese and English
